

# RIZWAN ULLAH

Software Engineer | Full-Stack Engineer | MERN Stack Developer  
Peshawar, Pakistan | rizwanullahicp0306@gmail.com | +92-306-9675420  
GitHub | LinkedIn | Portfolio

## PROFESSIONAL SUMMARY

Software Engineering graduate with hands-on experience architecting and shipping production-grade full-stack web applications on the MERN and PERN stacks. Proven track record delivering end-to-end features — from relational and document database schema design to RESTful API development and responsive React.js frontends. Built four portfolio applications spanning AI-driven tooling, e-commerce, SaaS project management, and marketplace platforms, each implementing JWT authentication, RBAC, and scalable MVC architecture.

## TECHNICAL SKILLS

|                 |                                                                                       |
|-----------------|---------------------------------------------------------------------------------------|
| Languages       | JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3                                       |
| Frontend        | React.js, Next.js (learning), Tailwind CSS, Responsive Design, Component Architecture |
| Backend         | Node.js, Express.js, RESTful API Design, Middleware, MVC Architecture                 |
| Databases       | MongoDB (Mongoose ODM), PostgreSQL, Schema Design, Query Optimisation, Indexing       |
| Auth & Security | JWT, bcrypt, Role-Based Access Control (RBAC), Session Management, Input Validation   |
| Dev Tools       | Git, GitHub, Postman, VS Code, npm, Vercel                                            |
| Methodologies   | MERN Stack, PERN Stack, Agile, CRUD, REST Standards, MVC                              |
| Exploring       | Docker, Jest, React Testing Library, AWS/Cloud Fundamentals                           |

## PROJECTS

### AI-Powered Resume Builder

MERN Stack | React.js, Node.js, Express.js, MongoDB, JWT, Tailwind CSS, PDF Generation

- Architected a full-stack AI resume builder with real-time preview — users see every edit reflected instantly across modular resume sections without page reload, reducing time-to-complete-CV by an estimated 60%.
- Designed a flexible MongoDB document schema storing multi-section resume data (experience, education, skills) in a single queryable document per user, enabling sub-10ms read performance.
- Integrated an AI content suggestion API delivering context-aware bullet recommendations and professional summary drafts tailored to the user's target role.
- Implemented secure JWT + bcrypt authentication protecting all resume data endpoints, and a client-side PDF export pipeline preserving exact layout, typography, and template styling.
- Built 3 switchable Tailwind CSS resume templates supporting mobile and desktop viewports.

### Car Rental Management Platform

MERN Stack | React.js, Node.js, Express.js, MongoDB, JWT, RBAC, Tailwind CSS

- Engineered 20+ RESTful API endpoints across Cars, Bookings, Users, and Admin resource controllers with consistent JSON response formats and centralised error-handling middleware.
- Implemented a 2-tier RBAC system (User / Admin) with JWT-authenticated Express.js route guards, preventing unauthorised access to fleet and revenue management operations.
- Built real-time availability logic querying booking date ranges against the fleet database to detect and prevent scheduling conflicts before confirming reservations.
- Developed a dynamic pricing engine calculating rental cost from vehicle category, date range, optional add-ons, and seasonal rates via a single API call.

## Project Management System

*PERN Stack | React.js, Node.js, Express.js, PostgreSQL, JWT, RBAC, Raw SQL, Tailwind CSS*

- Designed a normalised PostgreSQL schema spanning 7+ tables (Users, Projects, Tasks, Roles, ProjectMembers, TaskAssignments, ActivityLogs) with foreign key constraints, cascades, and query-optimised indexes.
- Implemented a 3-tier RBAC system (Admin / Member / Viewer) enforced at API middleware level and reflected in conditional React.js UI rendering, eliminating privilege escalation risks.
- Built project-level analytics endpoints aggregating task completion rates, overdue counts, and member contribution metrics surfaced as a real-time progress dashboard.
- Authored complex multi-table JOIN queries and parameterised prepared statements, applying indexing strategies that reduced query execution time on large datasets.

## E-Commerce Web Application

*MERN Stack | React.js, Node.js, Express.js, MongoDB, JWT, Tailwind CSS*

- Built a feature-complete e-commerce platform covering product discovery, cart management, order processing, and purchase history, backed by a modular MVC Express.js API.
- Developed a persistent cart system in MongoDB with server-side stock validation on checkout, preventing overselling across concurrent sessions.
- Engineered a full order lifecycle pipeline (Pending → Processing → Shipped → Delivered) with atomic stock adjustment on placement and admin order management via a dedicated React.js dashboard.
- Implemented server-side filtered MongoDB queries via query parameter passthrough, improving catalogue search performance for large product sets.

## EDUCATION

### Bachelor of Science in Software Engineering

2022 – 2026

Islamia College University Peshawar — Peshawar, Pakistan

*Relevant Coursework: Data Structures & Algorithms, DBMS, Software Engineering, OOP, Web Technologies, Computer Networks, Operating Systems, Software Project Management*

## ADDITIONAL INFORMATION
